

MICROCHANNELING WITH PROCELL THERAPIES, THE MOST CUTTING-EDGE MICRONEEDLING TECHNOLOGY ON THE MARKET!

Microchanneling is a type of skin needling that taps precision micro-needles into the skin creating hundreds of thousands of uniform microchannels that stimulate the body's natural healing response. This initiates the production of new collagen. As the collagen matures, it shrinks pores and tightens the skin which softens scars, breaks up pigmentation and refines the skin's texture and tone. Within a year following a recommended series of treatments, the new collagen is thicker leaving the skin stronger and healthier.

Traditional microneedling is performed with a roller or pen that creates micro-tears in the healthy tissue surrounding the micro-injuries. Microchanneling is a stamping of the needles skin rather than rolling so the micro-tears do not occur, making for a better outcome.

Microchanneling is both preventative and corrective. It replenishes the body's natural loss of collagen due to age (we start losing collagen in our 20s), acne scars (ice pick and box car from cystic acne), fine lines, wrinkles, and hyperpigmentation. We recommend a series of 4 to start spaced 4-6 weeks apart. Additional treatments may be required for a desired result depending on the skin's condition.

Our Microchanneling Treatment

Because microchanneling can be uncomfortable it is recommended that the client numb for 45 minutes prior to the treatment. After the skin is cleansed, we begin the stamping process which is followed by the application of a stem cell serum and soothing collagen mask. Finish with 15 minutes of LED to further to increase circulation and accelerate healing.

Microchanneling, alone or combined with other therapies at Pulse, is a truly innovative way to rejuvenate your skin with no damage and little downtime.
